DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities:

Applicant claims forming an image selectively on **one** of the recording medium and the intermediate transfer medium at the image forming position...and transferring the image formed on the intermediate transfer medium to the recording medium at the image transfer position.

However, if the **one** medium to be printed is the recording medium, there is no image formed on the intermediate transfer medium. Thus, the claim needs to be corrected to properly address forming an image on the intermediate transfer medium.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Harris (6341860).

Referring to claim 1, Harris teaches a printing method comprising transporting one of a recording medium (102) and intermediate transfer medium (114) to an image forming position (See Column 3, lines 19-23 for image forming position of the intermediate transfer medium), forming an image selectively on one of the recording medium and the intermediate transfer medium at the image forming position (See Column 4, lines 6-8),

Art Unit: 2854

transporting the recording medium to an image transfer position (See Column 4, lines 29-34), and transferring the image formed on intermediate transfer medium to the recording medium at the image transfer position (See Column 4, lines 39-51), wherein said step of forming the image on the intermediate transfer medium is prohibited when the step of forming the image on the recording medium is performed. (The images are formed on the intermediate transfer medium and recording medium at separate times; See Figure 1 and Figure 2).

Referring to claim 2, Harris teaches a printing method, wherein when a mode of forming the image to the recording medium is set (See Column 3, line 46-47), the image is not formed on the intermediate transfer medium. (The image is formed on the recording medium separate from the image formed on the intermediate transfer medium).

Referring to claim 3, Harris teaches a printing apparatus according claim 1, wherein when the image is formed on the recording medium, the intermediate transfer medium is moved from the image forming position. (See Column 3, lines 37-47).

Referring to claim 4, Harris teaches a printing method, wherein when a mode for setting the image on the recording medium is set, the intermediate transfer medium removed from the image forming position. (See Column 3, lines 37-47; Figure 2; the intermediate transfer medium is moved or removed from the image forming position).
